Why not put...

Science at your service!

FERTILITYOBSERVATION.COM

SCIENTISTS HAVE LEARNED A LOT about how the woman's fertility cycle works. Now, you can put their research to work for you!

Women who use the Creighton Model FertilityCare System are the best educated women in the world when it comes to understanding how their bodies work. The good news is that Creighton Model FertilityCare services are now available in New York.

Through the Creighton Model FertilityCare System, women learn to maintain a daily record of various, easily observed, bodily signs. They quickly come to know when they are fertile — and when they are not. They take charge of their fertility.

That's not all...through the practice of daily fertility observation, a woman can also see if she is as healthy as she should be. Serious medical conditions can be detected early.

DON'T WANT TO GET PREGNANT?

- When used correctly, the Creighton Model FertilityCare System is 99.5% effective at avoiding pregnancy
- Given typical use, it is 96.8% effective (that's better than the Pill, which is 92% effective according to Planned Parenthood)
- More satisfying than artificial methods of birth control — without the negative side-effects
- Enjoy sex as it should be!

WANT TO GET PREGNANT?

- 76% of couples of normal fertility will get pregnant the first month they try
- For couples experiencing infertility, FertilityCare is 2-3 times more effective than IVF
- Learn you are at risk for miscarriage — before one even happens — and get the help you need to have a healthy pregnancy
- Reduce by half your chance of pre-mature birth — a major cause of birth defects

FOR YOUR HEALTH... FertilityCare is 95% effective at treating PMS and post-partum depression, reduces the "need" for hysterectomies by a stunning 75%, and shows promise as a means of identifying women at risk of developing breast cancer or osteoporosis.

FOR ALL WOMEN... Married and single, from teenage years through menopause...for your health!
